SAP® Signavio® Process Insights in action

THE BEST RUN **SAP**

Overview

You may face many challenges during your journey to SAP S/4HANA®. The efficiency of your process landscape plays a huge part in the resolution of those challenges. Learn why having full visibility into your process landscape is vital to the success of your journey to SAP S/4HANA. Explore how the SAP® Signavio® Process Insights solution helps you optimize your performance by getting instant insights into the core business processes of your SAP ERP application.

Overview

The challenges of an SAP S/4HANA transformation

The challenges of an SAP S/4HANA transformation

On paper, a successful journey to SAP S/4HANA depends on having properly trained people equipped with the tools and environment they need to do the job. However, during their business transformation journey, many business leaders continue to face a different challenge.

Let's delve deeper with an exemplary scenario: A company in the manufacturing sector wants to implement SAP S/4HANA. Everything is good to go, ready for the first rollout project. The timeline of the entire program is fixed, and more than 20 international subsidiaries will be affected. It's clear that the change has to be swift and smooth.

In an ideal world, the change to the new ERP system should go unnoticed by partners and customers. If this journey is not prepared for properly, companies face the risk of a temporary decline in productivity or even a standstill in some areas. The reason for this is that they don't have enough insights into their current operational business process performance and functional usage based on data from their SAP ERP application.

Overview

The challenges of an SAP S/4HANA transformation
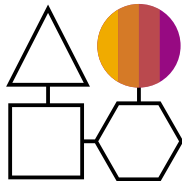

Without a proper understanding of your process landscape and the knowledge of how each process is affected, it can be difficult to build and execute a proper transformation plan for SAP S/4HANA.

An introduction to SAP Signavio Process Insights

To recap, many business leaders who want to implement SAP S/4HANA struggle to get all relevant information in a timely and efficient way to make the best decisions. They often rely on subjective, qualitative, and manual methods.

This increases the risk of poor process reengineering, misallocation of valuable company resources, and missed improvement potential. Falling short of company goals is, therefore, often the result.

Let's take a look at how software solutions can help ensure the success of your journey to SAP S/4HANA by using SAP Signavio Process Insights as an example.

SAP Signavio Process Insights is a process analytics solution that helps you rapidly discover areas for improvement and automation within your SAP business processes. It then automatically provides recommended actions to implement the necessary changes.

Helping you foster a solid collaboration between the business and IT, the solution is a core element of SAP Signavio Process Transformation Suite. The suite can help you build the case and start your transformation journey to SAP S/4HANA or run a process excellence initiative and get on a fast track for an effective understanding of your process performance.

Process Excellence is key for a successful journey to SAP S/4HANA

Finding the right solution for business professionals and process owners

Gaining insights into your processes to reach new levels of transparency

Process Excellence is key for a successful journey to SAP S/4HANA

Continuously monitoring, assessing, and improving your business processes are key to a successful SAP S/4HANA transformation. Process excellence is what you are looking for, and by using software like SAP Signavio Process Insights, you can enhance business processes and continuously collect performance data.

The solution you're choosing should readily connect to your SAP ERP application or SAP S/4HANA software and should also immediately surface process weaknesses and improvement opportunities. Look for capabilities such as process improvement recommendations for automating or modifying processes to achieve performance advancement at scale.

Process Excellence is key for a successful journey to SAP S/4HANA

Finding the right solution for business professionals and process owners

Gaining insights into your processes to reach new levels of transparency

Drill into business use cases to determine the root causes of performance issues and get built-in correction recommendations.

Finding the right solution for business professionals and process owners

Business professionals, process owners, and IT specialists are the stakeholders you need on board for your SAP S/4HANA transformation. That's why it is important for these stakeholders to find the solution you choose simple to use. Ideally, managers can prioritize where to direct their attention to see the biggest gains.

Solutions such as SAP Signavio Process Insights take this sentiment a step further and allow users from across the entire organization to be guided by automatic data-driven assessment of the health and viability of the company's processes. Stakeholders can then drill into business use cases to determine the root cause of their performance issues and get built-in correction recommendations.

Gaining insights into your processes
to reach new levels of transparency

By gaining insights into your processes, your organization can reach new levels of transparency for process performance during your journey to SAP S/4HANA. Mission-critical processes are at the heart of your company – not only for sales and purchase order processing but also for processes that span the entire business. These processes can include:

• Financial
• Manufacturing
• Quality
• Maintenance
• Service
• Claims
• Capital expenditures

Transitions to SAP S/4HANA often require months of strategizing and "design by committee." With SAP Signavio Process Insights, you can get full insights and recommendations within less than 24 hours of using the solution. An additional bonus: more than 50 correction recommendations, such as configuration changes or master data fixes, are built right in.
