2019 Deloitte

Agenda

About Deloitte

SAP S/4HANA Service Portfolio

S/4HANA Transformation Approach

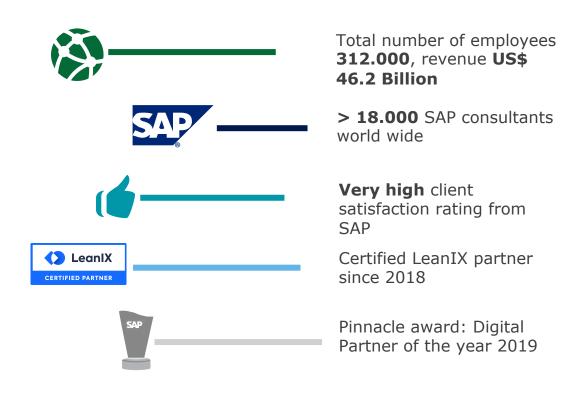

LeanIX as accelerator in a S/4HANA Transformation

Integration of LeanIX & SAP Solution Manager

2019 Deloitte

About Deloitte | SAP & LeanIX Expertise

Deloitte SAP S/4HANA Service Portfolio

S/4HANA brings a paradigm shift from a monolithic ERP system to a digital platform leveraging new technologies with ERP functionality at it's core

Market Situation

S/4HANA Ecosystem

Deloitte Services

ECC maintenance stop 2025

Need for digitization

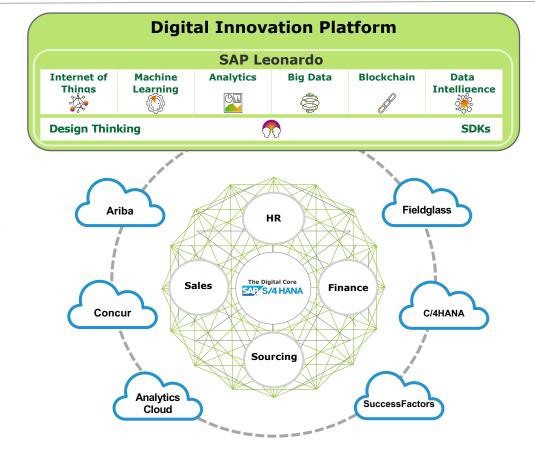

Compete with new Business Models

Increased end-user demands

Complex monolithic systems

Strategic Analysis and Capability Assessment

Business Process and Technical Capabilities

Selection of the Best-Suited Solution

Define Transformation Roadmap

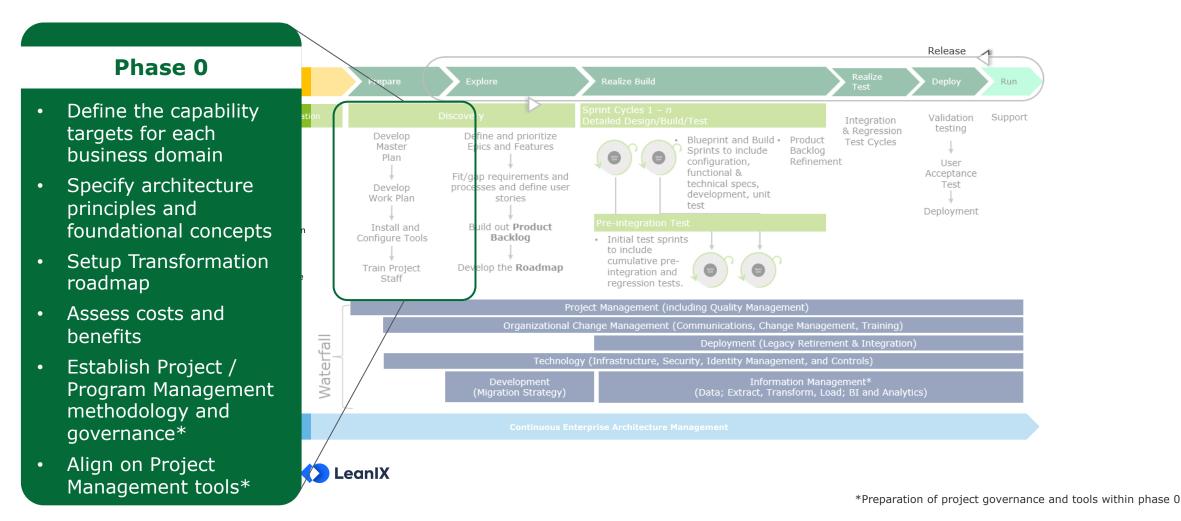

Implement Transformation

Support & Maintain Implementation

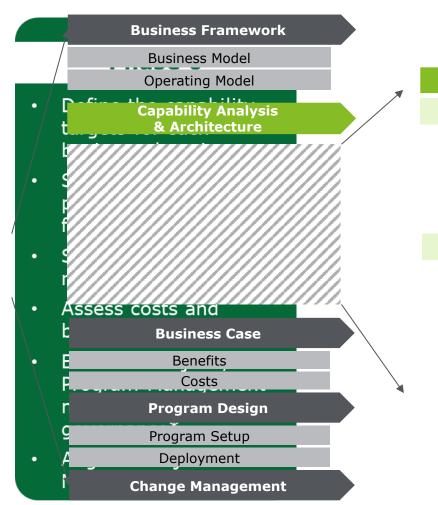

Deloitte Implementation Method for Business Transformations with S/4HANA

We extended our guiding methodology to deliver Transformation Projects by a Strategy & Foundation Phase, a so called Phase 0

S/4HANA Transformation Phase 0 in Detail

Phase 0 sets the foundation for every SAP S/4HANA transformation. Deliverables from Business and IT Architecture are essential to build this foundation

Capability Analysis & Architecture

Capability Analysis

- Capability driven Segmentation Define critical focus areas of capability assessment and determine As-Is maturity and differentiation requirements
- Capability Target Definition
 Analysis of Target Maturity for each capability area and transformation requirement

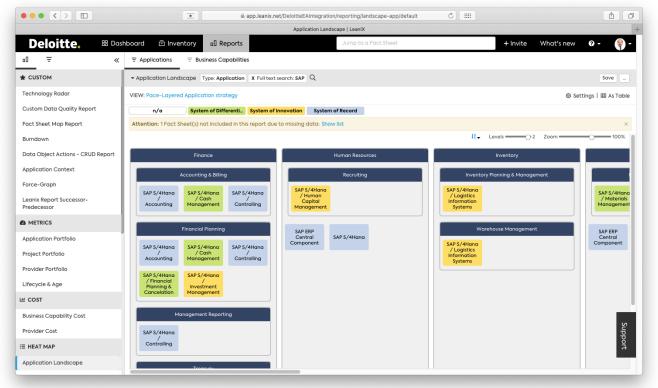

Architecture

- Capability/Architecture Mapping Mapping of target maturity with the As-Is architecture to identify the harmonization, standardization & optimization needs.
- Architecture Target Definition Prepare the target architecture as the foundation to build the changes in business models and processes
- Application Inventory Identify applications and used technology to enable ERP within the organization
- SAP Cloud Approach Evaluate the possible migration option to cloud as "private vs. public" considering the target transformation needs
- Transition Scenarios
 - Evaluate the best-suited transition approach to S/4HANA and prepare transformation roadmap

Architecture Target Definition (1/4)

Architecture Target Prepare the target architecture as the foundation to build the changes in business models and processes. Prepare the target architecture as the foundation to build the changes in ERP applications and apply view for capability segmentation.

Architecture Target Definition (3/4)

Architecture		Supported in LeanIX
Architecture Target Definition	Prepare the target architecture as the foundation to build the changes in business models and processes.	Option 3: Focus on integration via the analysis of information flows / interfaces and used IT components.

Architecture Target Definition (4/4)

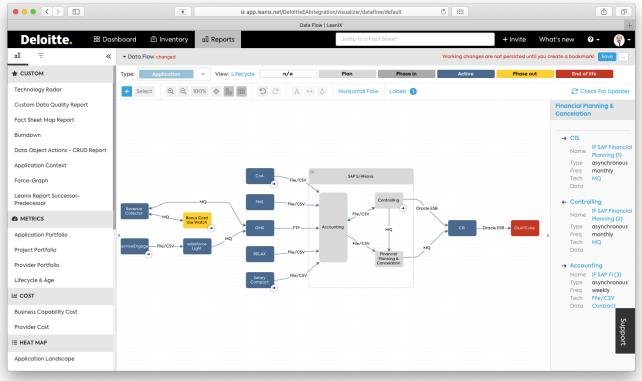

Architecture

Architecture Target Definition

Prepare the target architecture as the foundation to build the changes in business models and processes.

Supported in LeanIX

Option 4: Focus on integration via the analysis of information flows / interfaces and used IT components. Detailed analysis via Free Drawing.

Application Interaction with Data Flow and Interface Technologies

Application Inventory

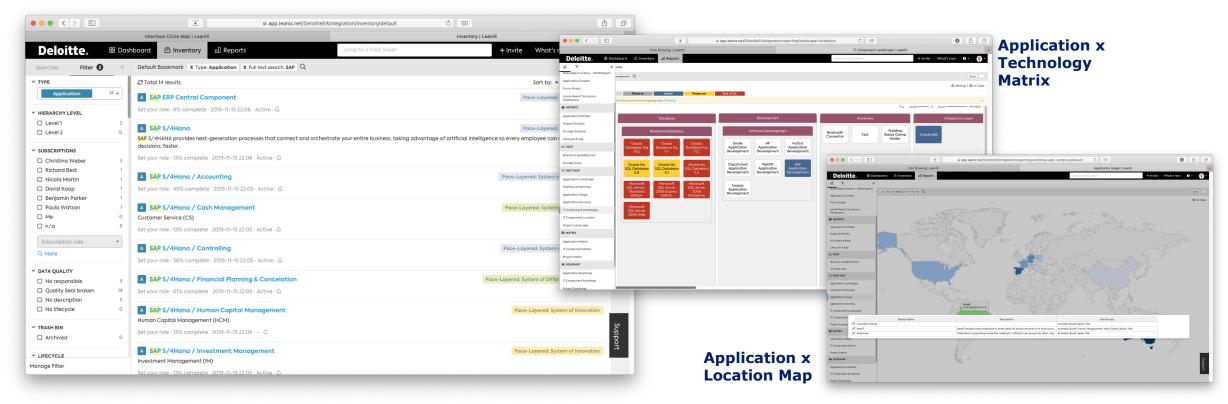

Architecture

Application Inventory

Identify applications and used technology to enable ERP within the organization.

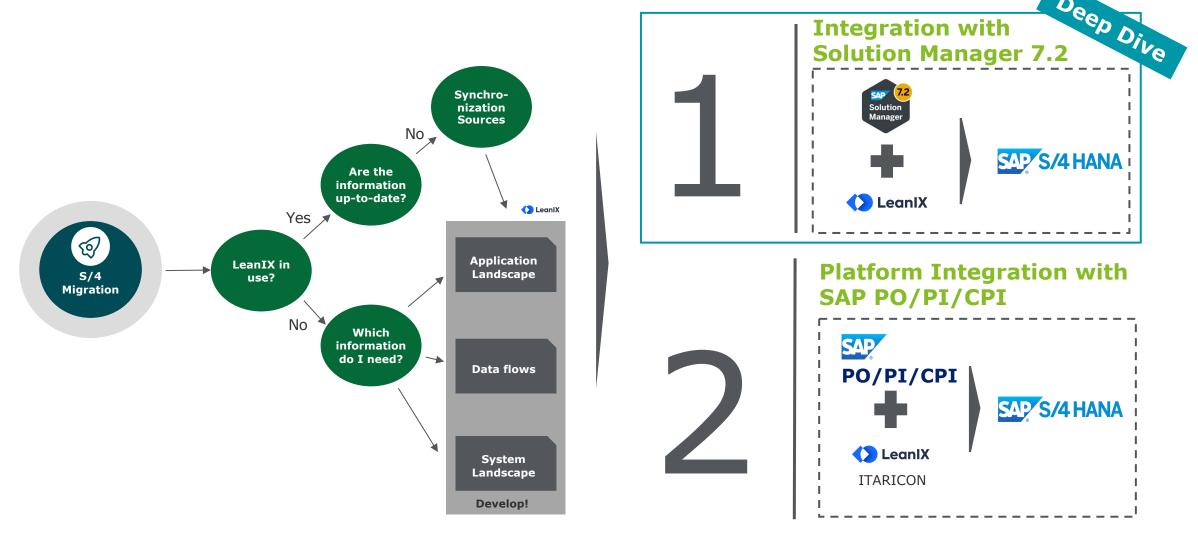

Supported in LeanIX

Collect and document the application portfolio with focus on "ERP".

Integration Scenario of SAP build in tools with LeanIX

An integration of build-in SAP tools using their managed information on the SAP architecture in LeanIX supports an effective architecture management

Option 1| LeanIX and Solution Manager 7.2 Integration

Relevant information are spread across different Fiori or WebDynpro applications and can be transferred into LeanIX

SAP Solution Manager offers Enterprise Architecturonstration relevant tools and insights:

- Business Process Modeling
- Landscape & Lifecycle Management
- Project & Change Management
- Monitoring of Interfaces and Data Flows
- Insights into SAP specific information:
 - Instances & clients
 - Add-ons & Industry Solutions

Synchronization via (semi-) manual transfer:

- 1. Identify LeanIX Fact Sheets to map SolMan data model
- 2. Export model data from SolMan as tab delimited file
- 3. Import in Excel & adaption to Fact Sheet meta model
- 4. Import of Excel/CSV file in LeanIX

Drawbacks:

- No automatic transfer of updates
- Errors due to inconsistencies
- Time consuming

Summary

Every S/4HANA transformation starts with the analysis of the enterprise architecture

In Phase 0, LeanIX fully supports the development of required architecture assets

LeanIX provides a consistent and reliable view on the business & IT architecture

LeanIX offers integration with SAP to foster As-Is architecture assessment

LeanIX acts (!) as an accelerator in a S/4HANA Transformation
